

Name: Ishika Pradhan

Age: 26

Birthdate: August 13,1998

Gender: Female

Nationality: Nepalese

Height: 5'5"

Current role or job responsibility: Student (no jobs)

Core Beliefs:

My academic journey is driven by a passion for emerging technologies, particularly artificial intelligence, and its applications in software development and Human-Computer Interaction (HCI).I believe technology should empower individuals and solve real-world problems efficiently, fostering innovation and accessibility. I am passionate about using tech to create solutions that enhance lives while ensuring inclusivity and ethical considerations.

Work Experience and Industry Involvement

I have 3 years of work experience. My focus has been on research and practical projects within the tech industry. My interest lies in applying AI-driven solutions to real-world problems, making technology more accessible, ethical, and inclusive.

Role of Technology in Society

I strongly believe that technology should empower individuals and be a tool for solving real-world problems efficiently. Innovation should prioritize accessibility and inclusivity, ensuring that advancements benefit diverse communities without ethical compromises.

Cultural Values and Technological Advancements

Cultural diversity should be respected in technological developments. I believe that technology should not only be a driver of progress but also an enabler of cultural preservation, inclusivity, and ethical use across different societies.

Challenges in My Master's Studies

One of the most challenging aspects of my master's studies is mastering complex topics such as machine learning models, natural language processing (NLP), and deep learning. Understanding the mathematical foundations behind these models, optimizing their performance, and applying them to real-world problems require continuous learning and practice. Despite these challenges, I find great motivation in exploring AI advancements and refining my skills to develop innovative solutions.

Research Interests and Academic Goals

My academic goal is to research emerging technologies in AI and improve software development practices. I am particularly interested in Human-Computer Interaction (HCI) and exploring how AI can be leveraged to create better, more intuitive digital experiences. My ultimate aim is to contribute meaningful research that bridges the gap between AI and human-centric design.
